

**1. Which two predators eat other predators?**

- a. Whales and meerkats
- b. Vervet monkeys and guppies
- c. Humans and chimpanzees
- d. Crows and vervet monkeys

**2. Draw a line to match the animals to their habitats**

Woodland

Savannah

Pond

Rainforest

**3. Can animals use behaviours to adapt to their environment?**

YES

NO

**4. Both chimpanzees and crows can use tools. Does this mean they are related species?**

- a. Yes, of course they are related because they both do the same behaviour.
- b. No, they have just come up with the same solution to a feeding problem.
- c. Maybe, if chimpanzees can grow feathers .

**5. Write the name of the animal species that ate these food items in the experiments.**

# ANSWERS

Key Stage 2

1. Which two predators eat other predators?

- a. Whales and meerkats
- b. Vervet monkeys and guppies
- c. Humans and chimpanzees
- d. Crows and vervet monkeys

2. Draw a line to match the animals to their habitats

Woodland

Savannah

Pond

Rainforest

3. Can animals use behaviours to adapt to their environment?

YES

NO

4. Both chimpanzees and crows can use tools. Does this mean they are related species?

a. Yes, of course they are related because they both do the same behaviour.

b. No, they have just come up with the same solution to a feeding problem.

c. Maybe, if chimpanzees can grow feathers.

5. Write the name of the animal species that ate these food items in the experiments.

Crows

Chimpanzees

Vervet Monkeys
